Daily use

How can I get a listing for things like 'Auto-ignition temperature' of all chemicals?

SDS Manager reads many values from your Safety Data Sheets (SDSs), such as the auto-ignition temperature, the physical state or the pH. You can show them as columns in your SDS list.

1. Open the location in **Manage SDS Library**.
2. Click **General** at the top right and choose **Personalized view**.
3. Click the + icon (**Add more columns**).
4. In **Select more columns**, search for the value, for example ignition, tick it and click **Select**.

You can add your own custom fields as columns too. Read more: How can I create custom fields linked to my SDSs?

SDS Filter and **SDS compliance** have a **Personalized view** button too, so you can see a value for all the SDSs in your library in one list.

Personalized view is part of the Pro and Enterprise plans.
