Why choose SDS Manager

What is unique with SDS Manager?

There is a wide selection of tools for maintaining a library of safety data sheets.

SDS Manager is an All-in-One SDS Management tool.

We have one of the world's largest databases of Safety Data sheets available in 29 languages.

We are unique in that we have transparent pricing with no lock-in period, and you only pay for the amount of SDS you have in your library, and you can have unlimited number of users and locations. Most other SDS management solutions price according to size of company in terms of the number of locations and number of employees.

SDS Manager has a world-leading method of extracting data from the Safety Data Sheet Files so that all data found in the SDS is available in a structured format. None of our competitors have anything similar. Most of our competitors only extract a few key data elements from the SDS file, while we extract everything. We can even provide you with an XML file of the extracted data that you can use in your ERP system.

We have migration tools that make a move to SDS Manager fast and easy.

Unique solution ID: #1017
