

SDS Inventory Manager in use

How can I check if any of our chemicals are included in the restricted chemicals list?

SDS Manager provides an overview of all chemicals listed in restriction lists such as ZDHC, California Proposition 65, REACH, and others.

Substances in these lists are identified by EC or CAS numbers.

SDS Manager will extract CAS and EC numbers from Section 3 of the SDSs you use and check whether these numbers are found in any restriction lists.

In SDS Manager, you can generate a list of all SDSs in your SDSs Library that contain restricted components.

Click here to [open SDS Manager and view the SDSs in your library that contain hazardous chemicals \(login required\)](#)

Here is an example of how we list products with components on restricted lists:

The above list is a prospective list of products that you need to evaluate.

Once you have verified that the contents are acceptable, you may want to mark the SDSs as 'Approved'
