SDS Inventory Manager in use

What does the ‘Update’ button on SDS Detail page do?

SDS Manager reads the information in each Safety Data Sheet (SDS), such as the hazards, the PPE and the values in each section. Sometimes we improve how this is done. When newer data is available for an SDS in your library, the SDS details page has an **Update** button (**Update SDS to latest extracted data**).

Click **Update** and confirm to use the newer data. Owners and admins can do this.

This does not change the SDS itself to a newer version from the supplier. For new versions, read User manual for "Manage SDS Updates" - see how you can upgrade SDSs to the latest version.

Unique solution ID: #1058
