Miscellaneous

How can I export our SDS library to a Excel/xlsx/csv file?

You can export your Safety Data Sheet (SDS) library to a file in three ways. Exporting is part of the Pro and Enterprise plans.

1. Export the whole library

1. Click **Reports** in the left menu.
2. Click **Export SDS library**.

SDS Manager prepares the file in the background and then downloads it as a CSV file (sds-library.csv), which you can open in Excel. Under **Reports** you also find **Classification and Labeling Report (GHS)**, a CSV file with the GHS classification and labeling information of your SDSs. Only owners and admins see these two items.

2. Export a location with the columns you choose

1. Open the location in **SDS Admin** (**Manage SDS Library**). To include the SDSs on its sub-locations, switch on **Include sub-locations**.
2. Choose **Personalized view** and click the ⊕ button **Add more columns**. Tick the data you want in the file, for example the flash point, or your own custom fields.
3. Click **More options** (⋯) at the top right and choose **Export SDS information to Excel file**.

The Excel file has one row for each SDS, with the columns of your Personalized view. You can choose from hundreds of data fields from the SDSs.

3. Export a filtered list

On **Filter** (**SDS Filter**) in the left menu you can filter your SDSs, for example to find all SDSs with the flammable (GHS02) pictogram. Click **Export to XLSX** to get the result as an Excel file.

Do you want to keep another system in sync with your SDS library? Use our API: How to use API to get JSON export/sync of your SDS Library to external systems
