

User management and access control

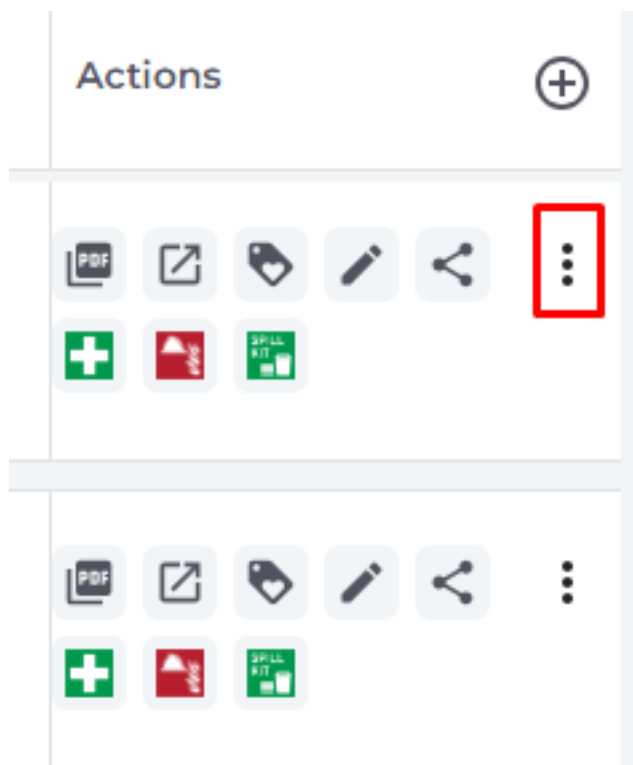

How can I hide SDSs with sensitive chemicals from other users?

Users with Owner and Admin roles can modify a chemical's visibility in a given location. Chemicals in different locations can be hidden from non-admin users. To do this:

(You will need Owner role or Admin role/permission to use this function)

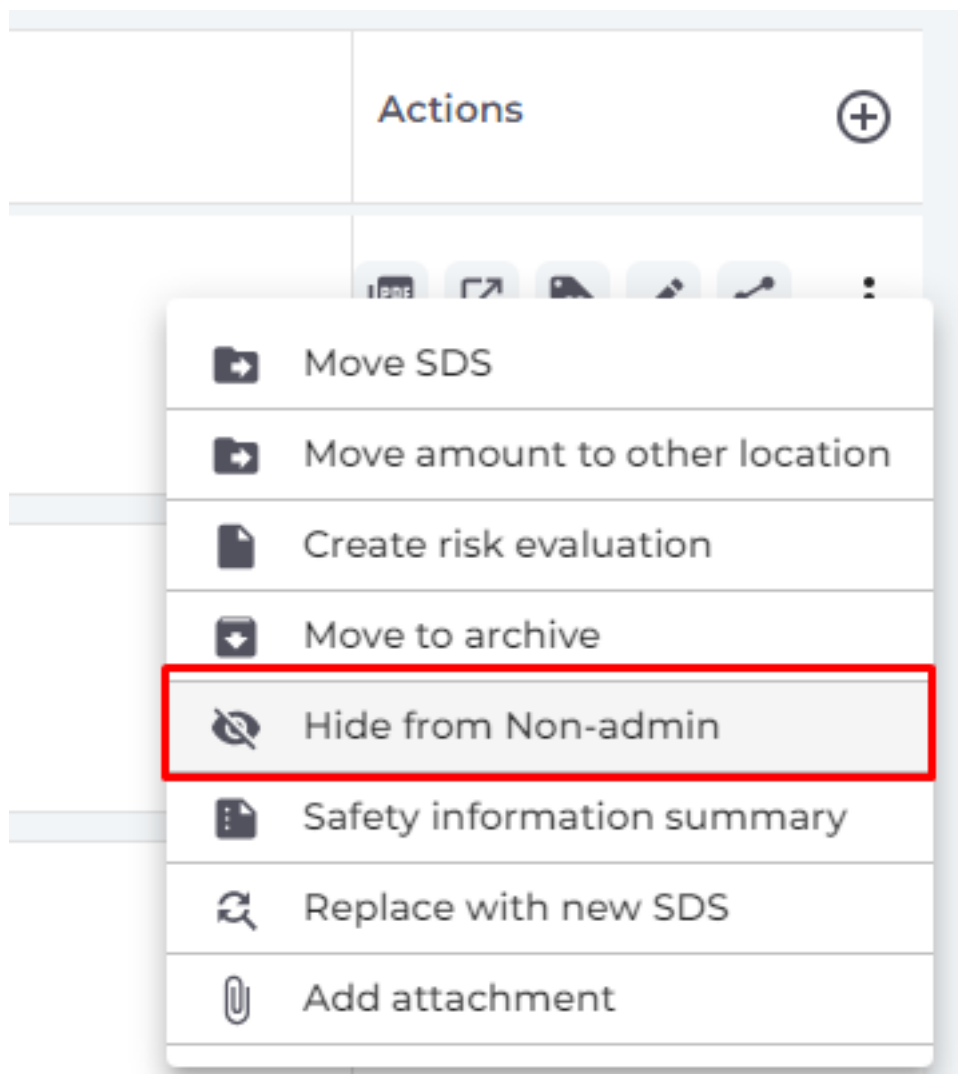

Step 1: Open "All my SDSs" or "Manage SDS Library" page and find the product you wish to hide from non-admin user(s).

Step 2: Click on the "More actions" icon from the "Actions" column:

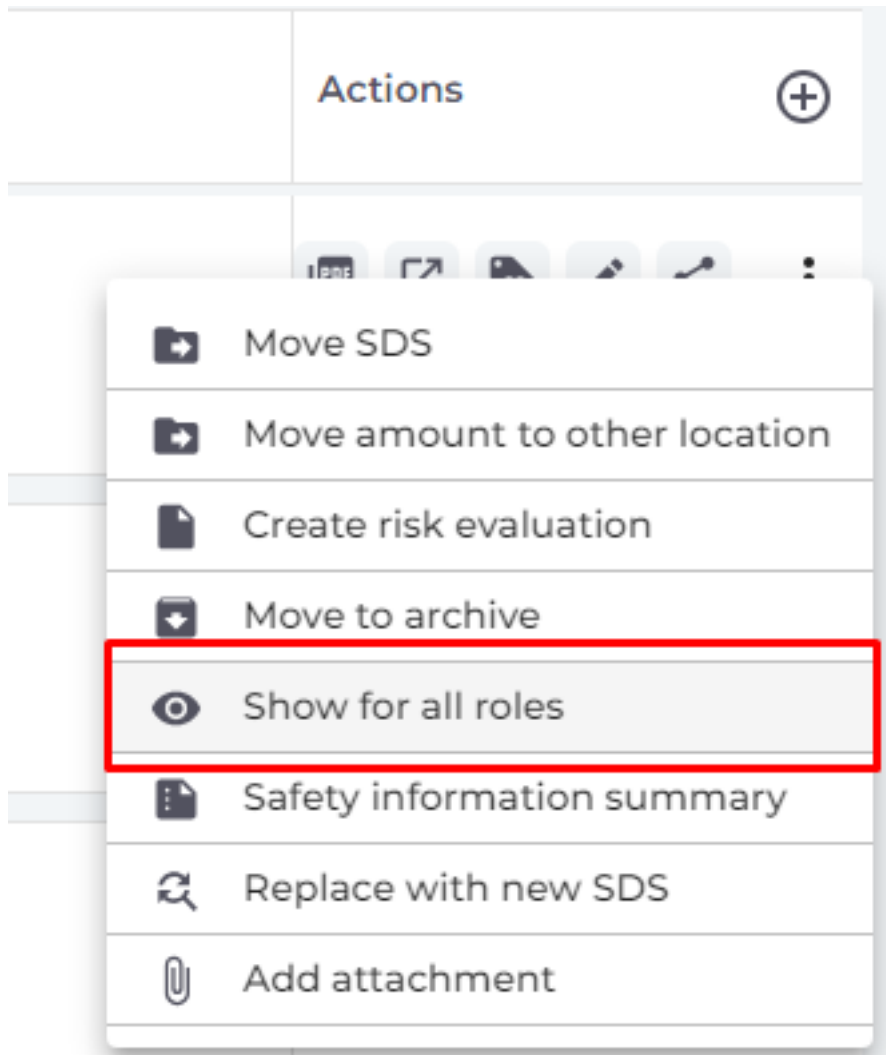

And from the expanded panel, choose 'Hide from Non-admin' option:

User management and access control

You can also unhide the chemical afterwards with the "Show for all roles" action on the same panel:

User management and access control
