## How do I create a product label with QR code to access SDS information?

QR code to access SDS is included in our customized Container Label and any other documents exported for our customers (exports of SDS Binders, Risk Assessment, Job Procedures, and Reports).

Here is how to create a label with a QR code to view the SDS PDF:

**Step 1:** In SDS Inventory Manager, open the 'All my SDSs' or 'Manage SDS Library' page.

**Step 2:** Find the product you wish to create a label with a QR code and click on the 'Print Label' button in the Actions column:

**Step 3:** Choose your desired label size, then download or print:

# Daily use

The screenshot shows a 'Print Label' window. On the left, a 'Print format' dropdown menu is open, listing various paper sizes from A4 (297x210mm) to A10 (26x37mm). A red arrow points to the 'A4 (297x210mm)' option. On the right, the 'Hazard statements' section has a toggle for 'Use standard statement description' which is currently turned off, with a red arrow pointing to it. The main content area displays a label for 'Hardener for Polyester' with two QR codes labeled 'View PDF' and 'Track Usage'. Below the QR codes, there is a list of hazard statements (H319, H351, H360, H400) and precautionary statements (P201, P210, P234, P235, P302+P352).

Now, you can scan the 'View PDF' QR code on the label to view SDS PDF.
