How can I export extracted data from SDS to a xlsx file?

On a [location](#) you can export all SDSs linked to the location. If you check the option "Include sub-locations" all SDS on the sublocations will also be included in the export.

On the Personalized View tab click the + icon, you can select what data should be included in the export file. Check the data you want to include. You can also include own [custom fields](#).

See below example file to see the kind of data that is exported.
