## How can I create a Safety Information summary of an SDS?

SDS Manager can automatically create a Safety information Summary with information from the SDS that is most relevant for the users of the chemical.

The Safety Information summary is created as shown below.

The screenshot shows the SDS Manager interface with the 'Pictograms & Controls' tab selected. The interface displays a list of SDS entries. The first entry is highlighted, and a context menu is open, showing the 'Safety information summary' option highlighted in red.

The interface has three main sections: 'Pictograms & Controls', 'Substance hazard', and 'Actions'.

The 'Pictograms & Controls' section shows four pictograms: a flame, an exclamation mark, a person with a star, and a tree with a star. Below these are four circular icons: a boot, a hand, a person, and a face. There are also two diamond-shaped icons: a flame and a tree.

The 'Substance hazard' section shows three boxes: 'H5' (red), 'S4' (orange), and 'E4' (orange).

The 'Actions' section shows a grid of icons: a PDF, a document, a tag, a log, a share, a plus, a fire, and a spill kit.

The context menu for the first entry includes the following options:

- Move SDS
- Log presence of product
- Create risk evaluation
- Move to archive
- Hide from Non-admin
- Safety information summary**
- Replace with new SDS
- Edit SDS information
- Add EAN code
- Add attachment
- Mark product as discontinued

The information in the summary does not have the same order as the SDS. That is intentional. The information most likely to be needed by a user of the chemical is presented first.
