Daily use

Print NFPA label for chemical

An NFPA label shows the NFPA 704 diamond of a chemical: health (blue), flammability (red) and instability (yellow), each from 0 to 4, and special hazards (white), such as OX for oxidizers or W for chemicals that react with water.

Print an NFPA label

1. Open the location in **Manage SDS Library**, click ⋮ on the SDS and choose **Print NFPA label**.
2. In **Set Hazard Levels**, check or choose the **Health Hazard Level**, **Flammability Hazard Level**, **Instability Hazard Level** and **Special Hazard**. If SDS Manager has found NFPA ratings for the product, they are filled in. Click **Continue**.
3. Check the label. Click **Write a description** to add a text, then click **Print Label**.

Don't see Print NFPA label?

The NFPA and HMIS options are shown when your organization's country is the United States or Canada. Click **More** in the left menu, then **Organization profile**, and check the **Country**.

NFPA on the secondary container label

The secondary container label can show the NFPA diamond too. In the label window, use the **NFPA** switch under **Content display**, and click the pencil next to it to change the levels. Read more: How to create Secondary container labels for hazardous chemicals
