Risk assessment of SDS, Job procedures and Exposure

Access Chemical instructions by scanning QR codes

When a Safety Data Sheet (SDS) has an approved risk assessment, SDS Manager makes a chemical instruction for it: how to use, store and dispose of the chemical safely, and which PPE to wear. Read how to make one: How to create a risk assessment of a chemical?

The secondary container labels you print for this SDS then have an **Instruction** QR code next to the SDS QR code. Read how to print labels: How to create Secondary container labels for hazardous chemicals

Employees scan the QR code with their phone and see the chemical instruction. They do not need to log in.
