

Users and QR code posters

Use enumerated custom field value to control what SDS an QR code poster is linked to

The primary function of a QR code poster (user) is to gain access to SDS linked to a Site/location.

Building A	Read Only
Building B	Read Only
Demo location	
> Factory Miami	
> Factory Paris	

SDS Manager offers an alternative method to link SDS to as QR code poster/user:

The screenshot shows the 'Manage Location Access' interface. At the top, there are settings for 'Language' (English) and 'Access setting' (Customize access). A red box highlights the 'Advanced access' button. Below this, a text block explains: 'Define which Safety Data Sheets this QR code will give access to. You can create multiple QR codes if you have organized your Safety Data Sheets by locations.' The 'Select user' dropdown is set to 'Demouser English'. Below that, 'Building A' is selected with a 'Read Only' access level. A modal window titled 'Advanced access' is open, showing 'Custom fields of enumerated type' set to 'Department'. The 'Custom field value' dropdown is open, showing 'Department South' and 'Department East' selected with checkboxes, and 'Department North' unselected. A 'Save' button is visible.

In the above example, we have created an Enumerated custom field named "Department".

On the SDS Detail page, we can select the Department in which the product is used.

Users and QR code posters

When users scan the QR poster, they will get access to all SDSs that are linked to either "Department North" or "Department South"
