## **Users and QR code posters**

## Use enumerated custom field value to control what SDS an QR code poster is linked to

The primary function of a QR code poster (user) is to gain access to SDS linked to a Site/location.
SDS Manager offers an alternative method to link SDS to as QR code poster/user:
In the above example, we have created an Enumerated custom field named "Department".
On the SDS Detail page, we can select the Department in which the product is used.

## **Users and QR code posters**

When users scan the QR poster, they will get access to all SDSs that are linked to either "Department North" or "Department South"
