

Users and QR code posters

Use enumerated custom field value to control what SDS an QR code poster is linked to

The primary function of a QR code poster (user) is to gain access to SDS linked to a Site/location.

SDS Manager offers an alternative method to link SDS to as QR code poster/user:

In the above example, we have created an Enumerated custom field named "Department".

On the SDS Detail page, we can select the Department in which the product is used.

Users and QR code posters

When users scan the QR poster, they will get access to all SDSs that are linked to either "Department North" or "Department South"
