SDS Manager er et verktøy som hjelper deg med å opprette og administrere SDS-er. Når du laster opp en fil, prøver SDS Manager å detektere formatet. Hvis det ikke lykkes, kan du velge mellom flere alternativer for å håndtere feilen.

SDS Manager kan ikke detektere SDS-formatet i denne filen. Her er noen alternativer for å løse problemet:

- Ignorer denne filen (ikke anbefalt)
- Prøv å importere filen med OCR (Optisk Tekstgjenkjenning). Dette fungerer best hvis filen er et bilde av en SDS.
- Legg til SDS i biblioteket med manuelt innførte produktinformasjon. Dette er den beste løsningen hvis du har produktinformasjonen tilgjengelig.

Hvis du velger å manuelt legge til produktinformasjonen, vil du bli bedt om å fylle ut nødvendige felt. Dette inkluderer informasjon om produktet, leverandøren og potensielle farer.

For mer informasjon om hvordan du bruker SDS Manager, kan du se på vår nettside eller kontakte kundestøtten vår.

A screenshot of a web application interface. At the top, a dark grey header bar contains the text 'Add substance to Factory Himalaya' and a close button (X). Below this, a white modal dialog box titled 'Upload Status' with a close button (X) is centered. Inside the dialog, the text 'Uploading and Analyzing' is displayed. Below this, a file icon (blue square with a white document symbol) is next to the text 'example invalid sds file.pdf'. To the right of this text is a red pill-shaped button with the word 'FAILED' in white. Below the file information, a light pink horizontal bar contains a red warning icon (exclamation mark inside a circle) followed by the text 'One or more files had issues with import. See details on Import status page'. At the bottom of the dialog, there are two links: 'Open import status page' in blue and 'Close' in grey.
